Many companies today face intense competition from around the corner and now, thanks to the internet, from around the world. How do you provide the same level of service as your competitors while eliminating costly mistakes? How do you operate more efficiently and gain more control of your future? You start with SAP® Business One, the complete business management system that integrates inventory, shipping, service, finance, accounting and sales.

Suddenly, the direction you need to go in is clear. With SAP Business One you'll be able to:

- **See** a complete picture of any customer. By calling up order histories and buying patterns in real-time, you'll be able to give better deals or propose alternative ship dates - and keep them coming back.
- **Offer** customers better deals or propose alternative ship dates. You'll no longer just stay afloat by competing on price; you'll proactively grow your business and navigate it in the direction you want to go.
- **Easily** see, manage, move, price and control inventories across multiple locations, avoiding costly mistakes that reduce margins.
- **Access** one integrated view that puts you at the helm. You'll have all the info you need right down to the desktop level.
- **Achieve** minimum stocking levels while maximizing stock turns and reducing the cost of carrying extra inventory / productivity to really navigate your business. SAP Business One is affordable, prep-packaged and pre-configured for fast implementation and a short learning curve.

With the help of SAP Business One, you can truly automate your entire operation by integrating sales with the back-office and warehouse, along with wireless warehouse management and the latest RFID and bar coding technologies. You'll increase productivity to really navigate your business. SAP Business One is affordable, prep-packaged and pre-configured for fast implementation and a short learning curve.

Intuitive Use and Speedy Installation

Enhancements in the new version of SAP Business One make the solution even easier to use and implement.

A more customizable and intuitive interface allows users to filter information and access the data they need to run their business; tool tips have been added for better navigation; and other improvements make it easier to work with attachments and facilitate access to online help.

The solution's new implementation tool, Copy Express, allows SAP partners to easily copy custom reports, queries, user settings and other configurations from one installation to another. These configurations can then be easily deployed at customer sites, reducing set-up time and deployment errors.
