### Everest Software is *Your Business Operating System*

Everest<sup>®</sup> empowers you to efficiently manage every function of your business from a single software solution. Offering wide capabilities and customizations, its full, real-time integration makes Everest the ideal solution for growing small and medium-sized businesses in the retail, wholesale, distribution, eCommerce and service marketplace.

Everest Software is the proud winner of the SIIA Codie Award for "Best Business Software Product".

### Everest Handles Every Aspect of Your Company's Operations with a Single Solution

Everest Software provides a comprehensive business application with all business functions integrated into one solution. Everest will manage your:

- Accounting
- Order Fulfillment
- eCommerce
- CRM
- SFA/Contact Manager
- Marketing ROI
- Inventory Control
- Purchasing
- Point of Sale
- Shipping/Receiving
- RMAs
- US Payroll

### Real-Time Integration

Offering real-time integration, Everest lets you make smart and informed business decisions and offers you full visibility into your entire business.

With real-time integration you will see improvements in employee productivity, inventory management efficiency and increased customer satisfaction and retention, giving you a rapid return on investment.

### Multiple Delivery Options

Everest is the *first and only* solution to offer you the freedom of choice when deciding on the best deployment method for your company. Everest offers an on-demand "subscription" solution or a traditional on-premise solution.

### Accounting

- Eliminate the cost of re-entering transactions and data with Accounting functions integrated to all areas of your business
- Improve cash flow with better visibility into accounts receivable
- Improve staff efficiency with easy reconciliation of information
- Detect and deter fraud with audit trails

### Inventory

- Track available-for-sale quantity with real-time updates based on sales, purchases and returns from all channels
- Fulfill more orders by configuring logical picking routes
- Easily track stock status for products that are bought and sold in multiple units of measure
- "Put-away" bins can be pre-configured to recommend an efficient and consistent way to carry products

### eCommerce

- Double revenue without adding customer service reps by integrating customer self service with your Web storefront
- Allow your customers to quickly repeat purchases with customer specific product lists
- Increase customer retention by displaying real-time inventory levels and order status on the Web
- Be able to ship orders in a single day with an integrated eCommerce store and back office solution

### Purchasing

- View recommended purchase quantities based on all factors influencing supply, including stock and pending sales/purchase orders
- Track delivery dates for future orders at the line item level to reduce carrying costs
- Negotiate better pricing from vendors with easy access to complete purchase history for each product
