Sales Channel: Direct in North America and no resellers

Intrust Win distribution software delivers the visibility into operations, customer and suppliers that is required to help track products, lower inventory levels and deliver on customer specific requirements while lowering the costs of internal operations. Built on Microsoft technology, Intrust Win delivers the integration from customer to warehouse to general ledger to supplier needed to support your growth while allowing the flexibility required to meet increasingly difficult customer demands.

Intrust Win offers a complete range of applications to cover all your needs regardless of whether your business is focused on vendor managed inventories, mobile sales, or more traditional transaction sales.

- Production
- Material Requisition Planning

##### eBusiness Applications

- Catalog
- Shopping Cart
- Order Status
- A/R Status

Designed for the distribution industry with the user in mind, Intrust Win is easy to use and fast to implement. User friendly screens provide the access to the data that you need to quickly enter quotes, convert them to orders, verify the orders and get them out the door and on their way to your customer.

Multiple replenishment methods provide the flexibility to match the method to the product to insure the most accurate and timely purchase actions. The system will assist in choosing the best vendor for the items based on best price or fastest delivery or set your own criteria. The purchase requisitions generated can be edited and purchase orders automatically generated.

The Warehouse Management application gives you the option of printing all the required warehouse documents or going paperless with real-time wireless hand-held devices. With either option you gain control of your warehouse operations and the visibility that you need to insure the smooth flow of goods throughout the process.

With all the Intrust Win applications in a single database, information is seamlessly shared between applications and your users. That means no re-entry of data and your important information is available to all those who have a need to know. In addition the system will alert your staff to key events via reports or emails. Info-Alert is the trigger mechanism that allows you to set the event triggers that generate a notification to your staff members.

Intrust Win is tightly coupled with the Microsoft productivity products making it easy to move data to Excel, Word and Access and making your staff more productive.

Intrust Win provides all of this at an affordable price giving it the best price/performance ratio in the industry.
