Warehouse Management

Maintain inventory data accurate and up-to-date from the minute your warehouse receives product until the moment it leaves the shipping dock with Distribution One's Warehouse Management Software.

Here's how it works. With advanced scanners and mobile computers Distributions One's V2 Software Suite captures product information. Then wireless devices transmit information back to the V2 system, allowing real-time access to data for better control of inventory.

Speed shipping time to reduce costs.

Minimize errors and bottlenecks at the picking stages by using bar code scanning for accurate data capture to quickly prepare products for staging and shipping. Distribution One's Wireless Warehouse Management software, will give users access to data in real time, so you'll reduce inventory costs as well as the time it takes to ship goods to customers, thereby improving customer satisfaction.

Improve customer satisfaction and your bottom line.

From receiving through to the shipping dock, V2 users track inventory in real time for greater control. Distribution One's Warehouse Management Solutions gives you real-time visibility into your warehousing functions and improves accuracy, so you're able to focus on your bottom line.

Some of the Inventory and Warehouse Management features include:
