Everest Warehouse Management Saves Your Company Time and Money with Effective Warehouse Processes

Everest[®] has set a new standard in Warehouse Management. Our fulfillment and receiving features help you streamline your processes to eliminate inefficiencies. We optimize investments in inventory and ensure materials are available at the right place and at the right time. Everest gives all departments within your organization transparent access to accurate inventory data and results in improved customer service and more efficient order handling.

Enhance Inventory Control and Visibility — Everest inventory management is integrated with all functional areas of your business. Stock details are always up to date based on sales, purchasing, stock transfers and adjustment transactions.

- Options for just-in-time, drop shipping and stocking inventory can be used to keep your inventory cost down and maximize inventory- turns.
- Minimum, maximum and re-order points can be configured for each product or collection. Everest will make recommendations on which products to purchase based on seasonal demand or need.
- Drop shipping inventory to a customer is a breeze. Purchase orders are always accurate with customer shipping addresses, products and delivery details copied directly from sales orders.

Improve Efficiency Across Departments — Everest lets all departments and sales channels use the same inventory system. Pricing and quantity details are maintained in a single place. This eliminates the need to keep multiple systems up to date and lets your employees concentrate on helping customers and other tasks to help you stay ahead of your competition.

- Configure warehouse positions for each stock bin so that pickers take a logical route through your warehouse.
- "Put-away" bins can be pre-configured to recommend an efficient and consistent way to carry products.
- Everest allows you to maintain multiple replenishment points for *each* product to improve purchasing decisions.

Reduce Inventory Costs — Everest inventory management will help you make intelligent purchasing decisions by considering demand from customers as well as the pending purchase orders you have already created. Configurable item replenishment tools allow you to generate purchase orders for only the products you need.

- Everest provides all the functionality necessary to increase order accuracy and effectiveness of your receiving and distribution processes.
- "Available-for-sale" quantity is also maintained so your staff knows exactly how many units they can commit to customers.
- All quantities are maintained globally as well as for each warehouse or retail location you operate.
